

K-Set (Winter Accelerator)

K-Set is a non-corrosive masonry accelerating admixture which contains no calcium chloride. K-Set accelerates the hydration of cement resulting in shorter setting times and high early strength. K-Set provides improved workability, helps prevent segregation and is a substantial aid in early hardening for mortar and stucco mixes. K-Set is an aqueous solution of organic and inorganic compounds that produces a rapid heat development of the masonry mortar, protecting it from freezing during its early life at low temperatures.

- ▶ Speeds setting times one to three hours
- ▶ Protects from freezing during early mortar life
- ▶ Reduces production time due to the improved workability and reduced set time
- ▶ Increases protection for reinforcing
- ▶ Produces high early strength
- ▶ V.O.C. Compliant

K-Set is the functional equivalent to Euclid's "Accelguard 80", WR Grace's "Moreset" and Dayton's "Q-Set"

Winter Promotion: Receive 30 gallons free with every pallet order (pay for only 30 5-gal pails for every 36 5-gal pails ordered). Offer expires January 31st 2010!
