SpecTilt WB

SpecTilt WB: Florida Atlantic University

Contractor: Woodland Construction Company

256,000 square feet of panels cast

FAU presented a challenging tilt panel project. The contractor had to place and tilt 9 story panels on site. SpecChem provided a compatible system consisting of bondbreaker and curing compound that met the difficult requirements called for by the specifiers.

Woodland Construction cast and picked 90' tall panels riddled with window openings with ease. The panel faces are smooth and tight.

Woodland Construction of Jupiter, FL is a recognized leader in the tilt-up construction. Woodland construction has completed some of the most challenging and innovative projects in the industry.

SpecTilt WB

Water-based Bondbreaker

- Clean Panels, no residue
- Resists foot traffic abrasion
- VOC Compliant

Cure & Seal WB

Water-based Cure & Seal

- Water based. Low-odor ideal for interior application
- VOC Compliant
- Complies with ASTM c309
