

SpecFilm

Don't lose another job due to Mother Nature!

SpecFilm is an evaporation retardant and concrete finishing aid. When sprayed over fresh concrete, it forms a thin, continuous film which prevents rapid and inconsistent moisture loss from the concrete surface. This results in a controlled evaporation of water from the concrete.

SpecFilm is the economical insurance necessary for concrete being placed in the harshest work environments, such as direct sun, blowing winds, high temperatures, or low relative humidity. SpecFilm is available in concentrate and a ready to use formula. SpecFilm reduces the opportunity for plastic shrinkage cracking, surface stickiness and wind crusting.

Features

- Easy to apply
- User friendly
- Available in ready to use and concentrate formulas
- Economical concrete insurance
- Cost effective
- VOC Compliant
- Excellent for both interior and exterior concrete projects
- Will not effect adhesion of curing compound or other treatments
