

Dry-Deck WB

Specifically designed for high-rise concrete deck forming applications

Dry-Deck WB dries quickly to form a durable, clear, waxy film on HDO & PSF overlaid forming plywood. Decks treated with Dry-Deck WB as a result, are much less slippery. Dry-Deck WB is much safer for workers on formed decks than conventional oil based form release agents on dense overlaid deck form applications. Dry-Deck WB chemically reacts with the concrete to produce a smooth, architectural concrete finish on resulting concrete ceilings.

BENEFITS:

- Dries to a tough, waxy film
- Environmentally friendly
- VOC compliant
- Low odor
- Ready to use
- Non-staining
- Helps eliminate build-up and bugholes
- Free of conventional petroleum oils
