

K-Set

(Winter Accelerator)

Meets ASTM C-494 and ASTM C-270

K-Set is a non-corrosive accelerating admixture which contains no calcium chloride. K-Set accelerates the hydration of cement resulting in shorter setting times and high early strength. K-Set provides improved workability, helps prevent segregation and is a substantial aid in early stiffening for mortar and stucco mixes. K-Set is an aqueous solution of organic and inorganic compounds that produces a rapid heat development of the mortar that protects it from freezing during its early life at low temperatures. K-Set is V.O.C. compliant.

K-Set is specifically formulated for use in cold weather or wherever it is desirable to reduce the setting time, increase early strength and improve mortar workability. Use K-Set to prevent the corrosive effect of calcium chloride admixtures.

Benefits

- Speeds setting times one to three hours
- Helps protect against freezing by accelerating early strength
- Improves production time by improving workability and reducing set time
- Increases protection for reinforcing
- Produces high early strength
- V.O.C. compliant
